

# ASSIGNMENT3-A simple RESTFULAPI using React.js, DataBase Creation, and Crseating Index

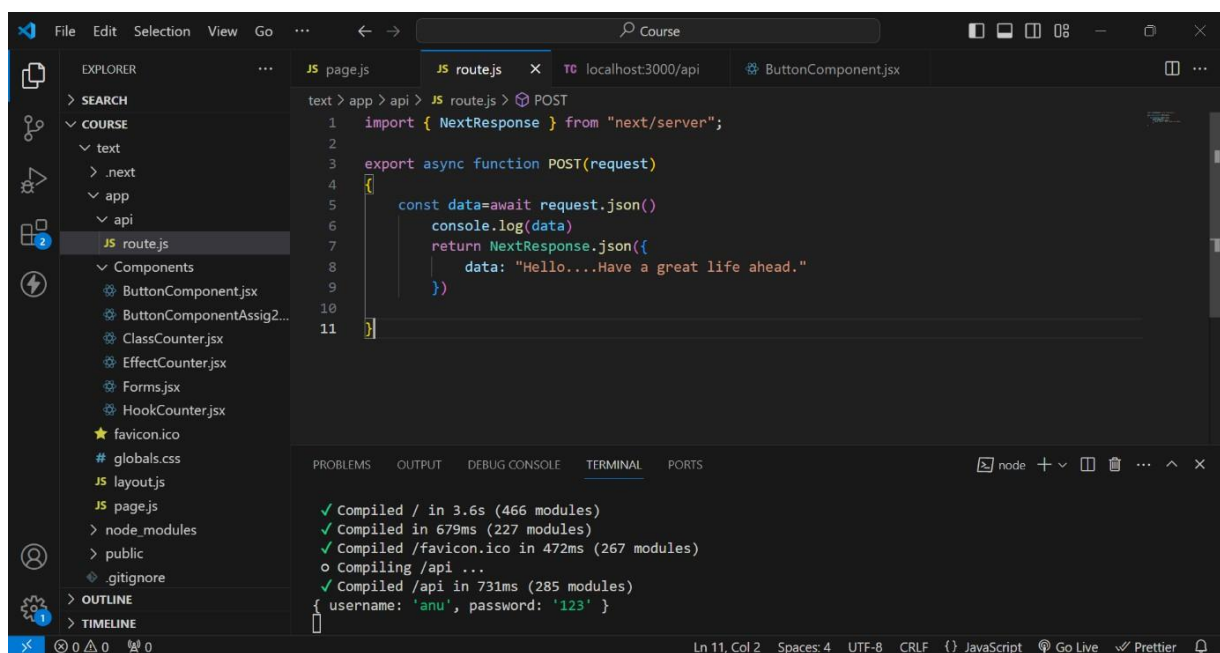

Name:Uma Lakshmi Sai Gude

Roll no:20NN1A1218

Email:umalakshmisai24@gmail.com

College:Vignan's Nirula Instituteof Science and Techonolgy for Women's

## RestFul API code

The screenshot shows a Visual Studio Code editor with a project named 'Course'. The file explorer on the left shows the project structure, including a 'route.js' file. The main editor displays the code for a POST endpoint in 'route.js'.

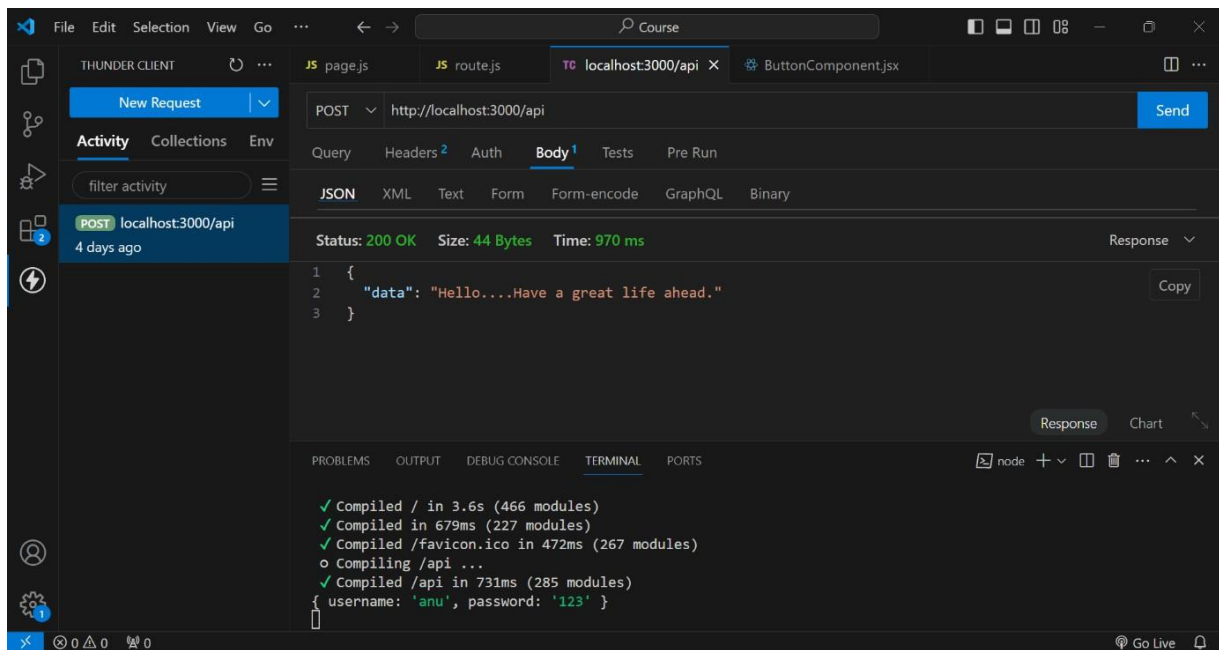

```
1 import { NextResponse } from "next/server";
2
3 export async function POST(request)
4 {
5     const data=await request.json()
6     console.log(data)
7     return NextResponse.json({
8         data: "Hello....Have a great life ahead."
9     })
10 }
11
```

The terminal at the bottom shows the output of the API call:

```
✓ Compiled / in 3.6s (466 modules)
✓ Compiled in 679ms (227 modules)
✓ Compiled /favicon.ico in 472ms (267 modules)
o Compiling /api ...
✓ Compiled /api in 731ms (285 modules)
{ username: 'anu', password: '123' }
```

## Rest Output on Thunder Client

This is the output when we create an API using REST.

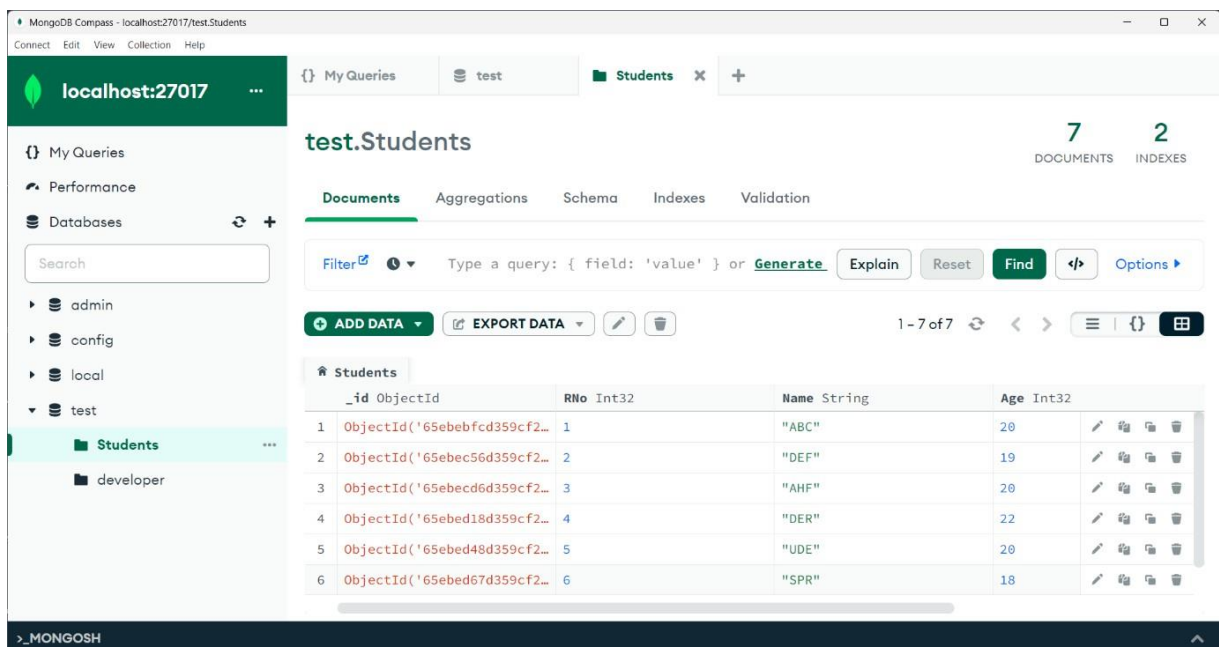

## Data Base Creation

1<sup>st</sup> we created a database named test

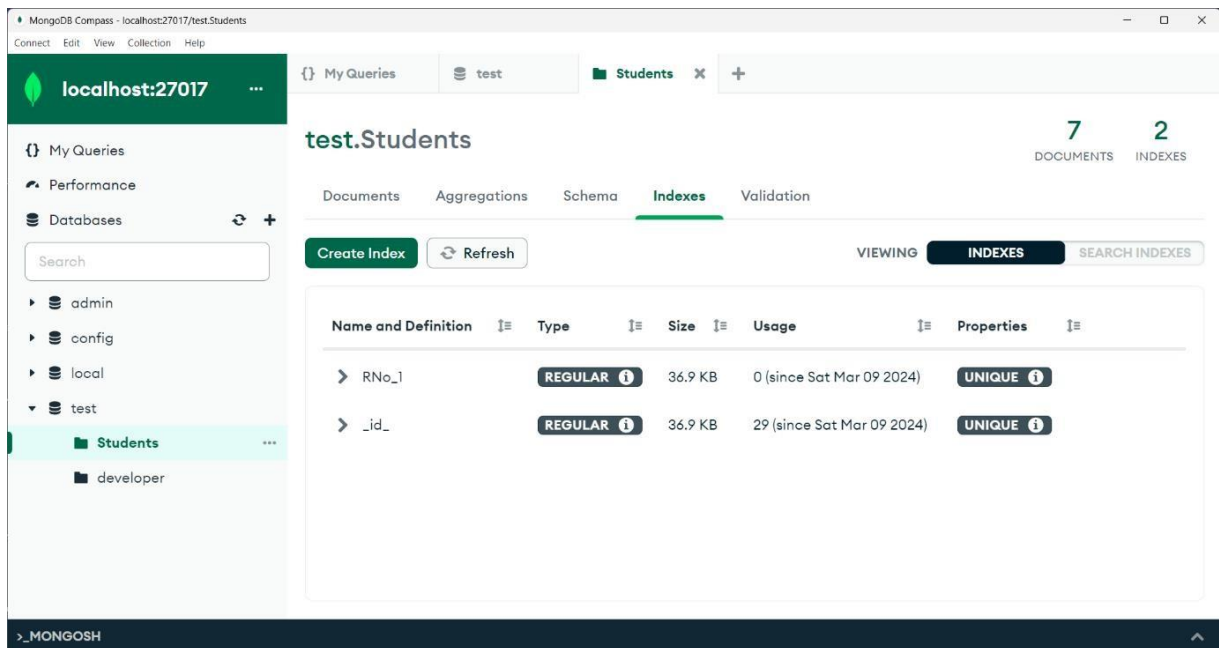

In that test we created a collection named Students

And finally by using ADD DATA ,we added data of the students like rno, name, age.

## Indexing Creation

As rno is the unique attribute through which we identify a student uniquely. So, here I created an index based on Rno. And assigned unique key to it.

## Indexing usage

As we gave Rno as unique, If we try to insert a duplicate document that is existed it shows an error like..duplicate collection.
